

STUDY ON FOOD HYGIENE AND SAFETY

IN KYOTO CITY AND THUA THIEN HUE PROVINCE

Yuya Tsubakino

Key Words: Food hygiene, Traditional food, Local administration, Food poisoning, Bacteriological testing, Kyoto city, Vietnam

1. INTRODUCTION

In human history, food culture and agriculture have created the region's unique culture. However, situation and environment concerning food is changing in these several decades. As trade network and transport technologies have been developing, agricultural and food products become to be exported all over the world. We become to eat foreign foods. As the distance between food consumer and producer have been increasing, food hygiene control from farm to table become be needed. In this way, change of situation and environment concerning food shifted administration system of food hygiene

In this study, two researches were conducted. One is the research on food hygiene administration system in Kyoto city and Thua Thien Hue province. Kyoto city has modern food hygiene administration system. On the other hand, Thua Thien Hue province is in maturing process of food hygiene administration system. To compare between Kyoto city and Thua Thien Hue province, regional differences of food hygiene administration were revealed. The other is the research of food hygiene condition in Thua Thien Hue province. Through this research, traditional food hygiene system which has taken root in Thua Thien Hue province for a long time was evaluated.

2. FOOD HYGIENE ADMINISTRATION SYSTEM IN KYOTO CITY AND THUA THIEN HUE PROVINCE

Research was conducted by cooperation of Kyoto city hall and Hue University of Agriculture and Forestry. Through this research, following results were gotten. Kyoto city have modern food hygiene administration system, and this system perform effectively. In addition, Kyoto city conduct various efforts involving food consumer, food manufacture and academic expert. Through these efforts, Kyoto city build characteristic food hygiene administration system. Next, Thua Thien Hue province is developing modern food hygiene administration system gradually. But, food hygiene administration is not conducted effectively in Thua Thien Hue province.

3. FOOD HYGIENE CONDITION IN THUA THIEN HUE PROVINCE

To study food hygiene condition in Thua Thien Hue province, two researches were conducted. One is survey of traditional food factory. Manufacturing process of traditional Vietnam's food and hygiene conditions of traditional food factory were surveyed. The other is bacteriological tests of foods in Thua Thien Hue province. Through these researches, following results were gotten. In Thua Thien Hue province, many traditional food factories are still remained. Food hygiene conditions of these factories are not so good. But by bacteriological tests, it is shown that traditional Vietnam's foods are safety. Traditional Vietnam's foods play role as one of the traditional food hygiene system in Thua Thien Hue province.

4. CONCLUSION

Kyoto city has two kinds of food hygiene administration. One is the modern food hygiene administration system which is based on Food hygiene law. The other is characteristic food hygiene administration system which involves many people from walks of life. On the other hand, Thua Thien Hue province has traditional food hygiene system which is based from long years experiments. To build ideal food hygiene system which suited each region, it is important that combine modern and characteristic food hygiene system like Kyoto city and traditional food hygiene system in Thua Thien Hue Province.
